

# Application Setup and API Usage

## 1.Configuration:

Properties Files:- application.properties

```
spring.datasource.username=xyz      //Change username and password As  
spring.datasource.password=abc12    //per your database configuration
```

## 2. API Testing

### Postman Collection

1. Import Postman Collection: After running the application, import the Postman collection JSON file into Postman for testing the APIs.(attached in mail/github repository)
